

Réunion d'information IPQED-Pied

29 avril 2020

Programme

18h00 | Accueil et walking dinner

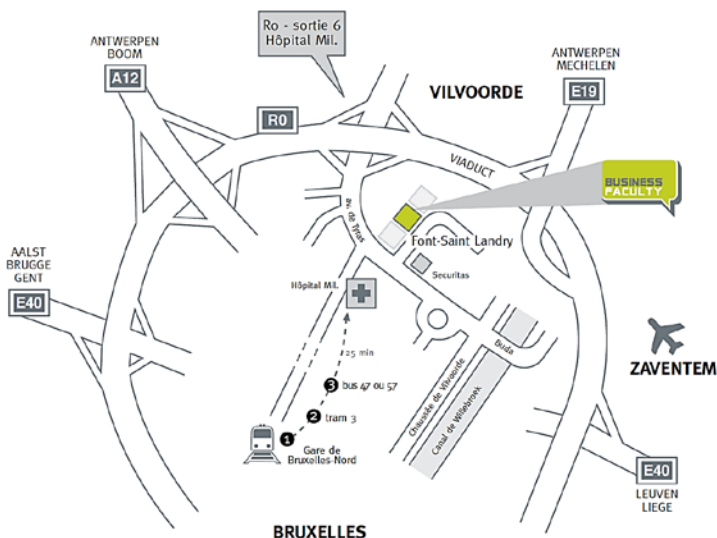

19h30 – 20h00 | Résultats d'IPQED-Pied 2018-2019
Présentation faite par Sciensano

20h00 – 22h00 | Les participants de la réunion d'information choisissent deux workshops parmi trois propositions de workshops (voir verso). Chaque workshop dure 60 minutes et est organisé par des membres du Groupe d'experts.

22h15 | Fin

L'accréditation « Éthique et économie » sera demandée.
Toutes les présentations seront en anglais.

Lieu

Business Faculty

Font Saint Landry 6
1120 Bruxelles (Neder-Over-Heembeek)

Workshops

(Physiopatho)logical approach of diabetic foot

Based on case studies, we want to highlight the multidisciplinary approach of diabetic foot, aiming to maintain/obtain a shoeable foot with the lowest possible chance of recidivism. Specific points of attention in this regard are: limiting the loss of tissue through an alert, but not too aggressive approach, and corrective orthopaedic surgery (as minimally invasive as possible).

Organized by: Dr. Frank Nobels, diabetologist – Dr. Wahid Rezaie, orthopaedic surgeon, from the Diabetic Foot Clinic OLV Aalst

Negative pressure therapy in diabetic foot wounds

The efficacy of negative pressure therapy in promoting diabetic wound healing has been largely accepted. In this workshop we will evaluate through case reports and evidence based literature the effect of negative pressure wound therapy on diabetic foot wounds, especially for prevention or reduction of minor and major amputations, and for infection therapy. We emphasize on tips and tricks, points of attention and pitfalls.

Organized by: Dr. Caren Randon, vascular surgeon – Els Rutten, diabetes educator, from the Diabetic Foot Clinic UZ Gent

Diabetic foot infections

Infections compromise both disease course and outcome of wounds and foot problems in patients with diabetes. During this workshop, we explain recently published guidelines (IWGDF 2019, ADA 2019, IDF 2017, ACCP 2016) in translation to clinical practice in Belgian diabetic foot clinics. Topics include diagnostics, estimation of severity and scope, treatment, specific wound dressings and quality of life. We will demonstrate new technologies in a hands-on session.

Organized by: Dr. Michel Vandenbroucke, diabetologist from the Diabetic Foot Clinic AZ Sint-Maarten

Inscription

Inscription obligatoire avec le code **IQFIM20** sur
www.sciensano.be/en/events/iqed-foot-information-meeting-audit-6
